

Bran Finishers  
KICE DATA SHEET | BF-2

## Kice Bran Finishers Give You The Performance You Expect

As the Kice Shortflow Mill® began to take shape in 1991, Kice recognized the importance of recovering the minute amounts of endosperm retained by the bran at the end of the milling process. The ability to retain this trace flour can make a marked difference in your bottom line. Drawing on input from millers, Kice designed equipment that is easy to operate and very efficient: the Kice bran finisher. Today virtually every milling company in the U.S. uses the Kice bran finisher in one or more of its mills.

### **BF27 Bran Finisher**

Rated capacity: 1,000-2,000 lbs/hr of coarse bran.

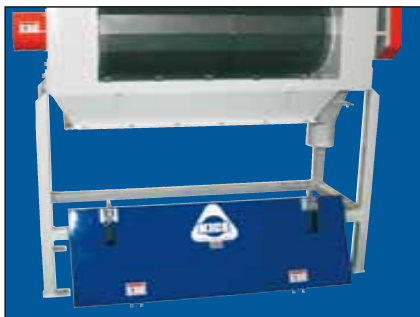

### **BF42 Bran Finisher**

Rated capacity: 2,000-4,000 lbs/hr of coarse bran.

### **Sanitary Support Frame**

Sanitary support frames are available for floor-standing or ceiling-hung installations.

### **Gasketed Doors**

Doors are hinged, have simple spring loaded latches and are easily removed.

### **Screens**

Screens are installed separately on each side of the unit for ease of access and service.

### **Sanitary Guards**

Guards are sanitary in design and painted OSHA orange.

### **Connection Points**

Connection points are all 5" OD standard, yet available in other sizes as required.

### **Bearings**

Bearings on each end feature heavy duty, self aligning, off-the-shelf double roller bearings.

### **Cast Iron Rotor and Beater Bars**

Cast iron rotor and beater bars are weighed and match marked for balance and smooth operation.

### **Suction Transitions or Vent Screens, External Handles**

Suction transitions or vent screens come standard on each unit. External handles adjust internal vanes that regulate the retention time of product inside the equipment.

# We make your job easier. **Today.**

Four generations of hands-on experience, the finest manufacturing equipment and practices, and rock-solid craftsmanship are brought to bear on your project, every time. Tell us what you want, we give you more.

- ▶ Strikingly simple engineered systems
- ▶ Timely proposals
- ▶ Standard assembly drawings to help you plan
- ▶ Coordinated fabrication schedule
- ▶ Special shipping options
- ▶ Trained and experienced workmanship
- ▶ State-of-the-art manufacturing equipment
- ▶ Technical support from true professionals
- ▶ Decades of unquestionable quality

Whether your system is a dream for the future or has been running for years - **we make your job easier.**
