

High-Efficiency Multi-Phase (HEMP) Dryers

Insurance for your Harvest

IEC Thermo HEMP dryers combine established drying and processing techniques into an attrition flash drying process that keeps cannabinoid molecules intact and undamaged, providing a timely and cost-effective means of stabilizing your valuable harvest before mold, mildew or composting can occur, allowing for future processing at a pace you determine.

Additional Features and Benefits

- Protection of your cultivars with low temperature operations
- Reduces material size to match your extraction and processing requirements
- Significant reduction in labor and square footage requirements
- Flexibility of modular drying systems to meet current demand and future growth
- Easily operated and maintained

System Details

- Built to your capacity requirements – 500 lbs. to over 30,000 lbs. per-hour (wet in)
- Continuous Feed, with 3-minute drying time
- Hopper, auger, and conveyor feed-in and output options to fit your requirements
- Integrated decarboxylation stage available
- Moisture levels reduced from 80% to under 10%
- Order-to-delivery time is 8 to 12 weeks depending on dryer capacity

Professional Installation, System Start-up/Training and Support

- IEC offers domestic and international installation of systems
- IEC is with you every step of the way, from start-up assistance and training to long term maintenance and system analysis
- Support packages customized to suit your needs

Information needed for your HEMP dryer quote:

- Harvested hemp moisture percentage
- Capacity requirements (lbs. of wet hemp to be dried per hour, for example)
