Donaldson.

Downflo[®] Oval Dust Collectors

A Family Of Over-Achievers

The high performance Downflo® Oval (DFO) family of over-achieving dust collectors is the best value available. Providing up to 25 percent more filtration capacity than same-sized cartridge collectors, DFO adds up to long-term savings and better performance.

The DFO advantage is found in the collector's patented design and components. Proprietary, ultra efficient filter media and cleaning technology allow more airflow through the collector without increasing the size of the footprint or damaging the filters.

A smaller collector helps lower the initial purchase price, reduces filter replacement costs and opens up valuable manufacturing floor space.

DFO Offers:

- Lower initial cost per cubic foot of air per minute (cfm)
- Long-term energy savings
- Fewer filter changeouts
- Reduced filter disposal cost
- Easy system set-up
- Less maintenance
- 10-year warranty

Outperforms All Other Collectors

The full line of DFO collectors offer a variety of benefits that distinguish them from all other collectors available in the market today.

- **Easy to use** Quick-release handles provide easy cover removal and faster filter access.
- **Compact** Smaller footprints for applications that require maximum cleaning efficiency in even smaller spaces.
- **Powerful** DFO collectors provide 25 percent more capacity than same-sized dust collectors.
- **Cost effective** The patented ExtraLife™ Filter Cleaning System averages up to 30 percent increase in pulse cleaning energy for unmatched cleaning ability.
- **Innovative** Unique oval-shaped Ultra-Web® cartridge filters provide the longest filter life and highest filtration efficiency which lowers cost.

Sizes & Operations

Normal Operations For Models 1-1, 2-2 and 3-3

- Incorporates several exclusive and unique features
- Completely self-contained, "plug-and-play" type units
- Packaged with power pack, controls, silencer, damper, dust container and more
- Remarkably quiet operation
- Exceptionally compact design
- Easily movable through standard aisles and doorways

Sizes & Operations

Normal Operations For Models 2-4 Through 4-128

DFO Models 2-4 to 4-128

- 23 standard model sizes
- Customized sizes available
- Many options and accessories
- Exceptionally compact design
- Highest energy savings

DFO Technology Unfolds

The Remarkable Story of DFO Begins with the Oval Cartridge Filter Itself

Ultra-Web Nanofiber Media A dramatic departure from traditional circular-shaped cartridge filters, DFO's oval-shaped filters, in conjunction with our patented nanofiber filter media, trap more dust on the surface of the filter than conventional commodity types of filter media such as depth-loading cellulose, polyester or cellulose/polyester blend.

Nanofiber technology is available in all Ultra-Web and Fibra-Web filter cartridges.

Commodity Filter Media 10 micron 600X

Conventional media has spaces of up to 60 microns between fibers, allowing dust to become deeply imbedded.

The Innovation Continues with DFO's Shorter, Stiffer Filter Pleats

DFO Filter Media Pleats Shorter and stiffer filter pleats help minimize dust entrapment and simplify filter cleaning. By reducing the height of the filter pleats from the standard 2 inches to 1.5 inches, the pleat wall is less likely to collapse or bend, which can encapsulate dust and prevent its expulsion.

More Airflow, Less Filter Media

New Oval Shape Contributes to Higher Airflow Capacity

High Performance Filters The Downflo Oval filter design is a reflection of Donaldson Torit's commitment to technical research and development. Oval-shaped filters handle up to 25 percent more airflow without increasing velocities, which can cause filter abrasion. Sophisticated FLUENT®*Airflow Modeling Software revealed that oval-shaped cartridge filters have fewer areas of high velocity, resulting in a lower potential for media abrasion and increased filter life.

Airflow Breakthroughs Lead To A New Chapter In Filtration Performance

Sophisticated Modeling Computer modeling for fluid dynamics, structural mechanics and acoustics puts DFO models 1-1, 2-2, and 3-3 in a technical class all their own. The illustration below (left) shows how FLUENT Flow Modeling Software enhanced the uniform air velocity distribution through model DFO 3-3. ANSYS®* Structure Analysis Software shown below (right) demonstrates lowest stress levels and deflections for model DFO 3-3 under typical operating pressures.

^{*} FLUENT is a registered trademark of Fluent, Inc.; ANSYS is a registered trademark of ANSYS, Inc.

Better Filtration, Prolonged Filter Life

Technical Discoveries Improve Filtration Performance And Prolonged Filter Life

Convex Side Walls A new cabinet design with convex side walls streamlines the airflow path and increases the cabinet's cross-sectional area. The convex side walls provide more space between filters, lower cabinet velocities and reduce the potential for media abrasion.

Pulse Cleaning Technology ExtraLife Filter Cleaning System uses proprietary, computer-modeled pulse cleaning technology to easily "pulse off" dust from the surface of the filter, improving filtration efficiency and prolonging filter life. The red lines in the illustration show the increased pressure at the front of the Downflo filter generated by the ExtraLife system. The blue line shows the pulse signature of a standard cartridge collector.

DFO Cartridge Filters For Many Applications

The DFO patented airflow design, its patented ExtraLife Cleaning System, and Donaldson Torit's unique oval-shaped filter cartridges are an unbeatable system. Choose from our superior line of filters to complete the most powerful filtration solution available for your application.

Ultra-Web® advanced nanofiber surface filtration technology ensures unequaled efficiency of 99.999% @ 0.5 micron dust particles, longest filter life, and greatest energy savings for most applications.

- Ultra-Web
- Ultra-Web FR (flame retardant)
- Ultra-Web NL (a "no-liner," banded construction for enhanced dust release on statically charged dust)

Fibra-Web® offers filtration solutions for fibrous, non-fibrous and agglomerative applications. A proprietary media featuring nanofiber technology and wider pleat spacing provides long filter life and efficiency of 99.999% on 0.5 micron dust particles.

- Fibra-Web
- Fibra-Web FR (flame retardant)

Ultra-Tek® media is ideal when collecting courser, fibrous dust. Proprietary synthetic media blend results in longer filter life, high efficiency and easier dust release during pulse cleaning.

Torit-Tex[™] filters provide exceptional filtration efficiency of 99.999% on 0.5 micron dust particles in moist, hygroscopic and agglomerative applications. Quick-release Tetratex® PTFE membrane technology supplies superior strength and maximum release capabilities in difficult applications.

^{*} Textratex is a registered trademark of Tetratec Corporation, a Donaldson Company.

Filter Changes and Discharge Maintenance

Easy Maintenance With the new design of the DFO's quick-release access handles, filter removal and maintenance is extremely fast with one simple movement of the clamp.

Bag-In/Bag-Out Arrangements Improve filter changeouts and hopper discharge maintenance, help minimize worker exposure to potentially harmful dusts, and reduce exposure of contaminants to the atmosphere.

- Porthole covers protect changeout bags and provide a clean appearance.
- Heavy-duty plastic bags hold filters and function as gloves during the changeout procedure.
- Filters are disposed of in a sealed bag.
- Bag-in/Bag-Out drum arrangement is safely held in place through drum latches and hose clamps.

Operating Advantages & Conditions

^{*} Sound measurements were taken in a hemianachoic chamber and under free field conditions and do not reflect the influences of actual operating environments. Standard sound pressure levels were taken at an operator position of 1.5 m high and 1 m from source.

Addressing Safety Concepts

Donaldson Torit manufactures or partners with experts to provide solutions for critical processes where harmful particulate must be controlled.

- Explosion Relief Panels (with or without weather domes)
- Suppression Systems
- Reinforced Housing Construction

^{**} Provided through Donaldson Torit fan program.

^{***} See system performance curves on page 12.

Donaldson Torit Look to Donaldson Torit for all of your air filtration needs. Although you may not always see our products, you can breathe easier knowing we're there.

Customer Support For nearly 90 years, Donaldson Torit has been the leading innovator of air filtration solutions that make manufacturing plants a cleaner environment for employees the world over. Driven by an unwavering commitment to customer support, Donaldson Torit is the name more manufacturers around the globe trust to deliver the most efficient and productive dust, mist and fume collectors and filter media.

Unparalleled Innovation Whether our customers need a single collector or a multi-faceted collection system, Donaldson Torit has the solution. The breadth of Donaldson Torit's innovative product line is unmatched, offering unparalleled filtration systems, ancillary parts and replacement filters. From central, source and ambient systems to baghouse, envelope and cartridge technologies, Donaldson Torit has the expertise to provide filtration solutions for virtually any application.

Global Reach Donaldson Torit manufactures and markets its filtration products throughout the world. As more manufacturers continue to expand and grow their operations globally, Donaldson Torit will be there to serve and support our customers' needs.

Rely on the Industry Leader When it comes to air filtration, you need a partner you can trust. Rely on the world leader in air filtration—Donaldson Torit.
