Extra-massive hot wash stainless-steel spray cabinet

The RS-750DS is the newest model parts washer with a completely rust-free stainless steel construction. Like the RS-750D, the Ranger RS-750DS comes with the latest features for rapidly degreasing the biggest car parts around. But with an entirely stainless steel construction, you can now be sure that your parts washer will outlast all of the competition! While this bigger size and weight capacity allows this spray wash cabinet to fit your larger car parts, the large cabinet space also allows you to fit more parts in at a time. With the extra room you can clean and degrease faster than ever before.
