**MFGR. OF MACHINERY AND EQUIPMENT FOR THE PROCESS INDUSTRIES**

The Aaron Process Equipment Company designs and manufactures a complete line of pulse-jet type dust collectors. These collectors are capable of meeting current federal, state and local air pollution codes.

The Aaron Process Equipment Company collector is a continuous duty, self cleaning type. It operates effectively and economically on an extremely wide range of dry materials and over a wide range of CFM's and loadings from filtering atmospheric air to handling the load of a pneumatic conveying system.

Aaron Process Equipment Company's working team has the technical abilities and experience to assist you in choosing the proper dust collectors for your system.

**THE FINEST IN NEW PROCESS EQUIPMENT SERVING INDUSTRY**

## HOW THE AARON PROCESS EQUIPMENT PULSE-JET OPERATES

The particulate laden air enters the dust collector by means of an inlet tube into the dirty air chamber. Upon entering the dirty air chamber, the velocity of the conveying air is immediately reduced allowing some of the larger and heavier particles to drop to the bottom discharge. The finer particles remain suspended in the air stream and rise to the filter area. Air is free to pass through the felted filter media while the fine dust particles are trapped and accumulated on the outside of the filter bag.

The bags are cleaned by removing this accumulation of dust cake with a momentary blast of high pressure air. This injection of air shoots into a precision made nozzle inside the filter element, which immediately stops the normal upward flow of air and sends a shock wave which flexes the bag, dislodging the dust cake on the outside of the filter. The compressed air then passes through the filter media washing additional dust from the media, resulting in a clean bag which is immediately returned on stream. The entire cleaning cycle is automatically controlled through a programming module and series of valves and is accomplished in less than 1/10 second.

**EACH AARON PROCESS EQUIPMENT COLLECTOR INCLUDES THE FOLLOWING:**

<b>COMPLETE HOUSING</b>	Consisting of a clean air plenum, dirty air plenum, plenum divider with caps and 60 degree hopper section for discharge of product.
<b>PRIMED EXTERIOR</b>	Medium oil alkyd primer.
<b>STUB DIRTY GAS INLET</b>	Flanged inlet available at additional cost.
<b>STUB CLEAN GAS OUTLET</b>	Flanged outlet available at additional cost.
<b>FLANGED DUST DISCHARGE</b>	Standard unless otherwise specified.
<b>HEAVY DUTY PLENUM DIVIDER</b>	Designed for 17" W.G. differential.
<b>LARGE MAN SERVICE DOOR IN DIRTY AIR PLENUM</b>	Every unit is supplied with one man access door.
<b>CLEAN AIR PLENUM SERVICE PORT</b>	Most units include a service port on the clean side for inspection and cleaning. Please see specific collector series to determine if there will be one on your unit.
<b>FILTERS</b>	One set 16 oz. (nominal) polyester felt filter bags. One set of filter supports.
<b>ONE PROGRAMMING MODULE</b>	A timing and sequencing device of proven design incorporating the latest in mechanical and solid state circuitry.
<b>NEMA IV ELECTRICAL ENCLOSURES</b>	Other ratings are available at additional cost.
<b>PRESSURE DIFFERENTIAL GAUGE</b>	A magnehelic gauge is standard.
<b>INTERNAL SERVICE PLATFORM</b>	Standard on round units over 3' dia. and the baghouse series. It is a recommended option in square units over 3' square.

AARON PROCESS EQUIPMENT GIVES YOU THESE EXTRA FEATURES:

#### OUR PATENTED POSI-SEAL BAG CONNECTION

Provides a positive dust seal over a wide range of filter medias.

Requires no hand or power tools for installation.

#### STEEL VENTURIS (NOZZLES)

Connected to the filter support cage  
for easy replacement if necessary.

Superior to aluminum venturi because  
of greater abrasion resistance and  
resistance to higher temperatures.

Provides an additional support to the  
filter support cage.

#### NICKEL PLATED CAP AND LOCKING RING

The bag connection hardware is plated with  
nickel on all mild steel and epoxy coated  
collectors as standard.

On stainless and other exotic materials  
the cap and locking ring are teflon coated  
for superior resistivity.

#### TOTALLY PREWIRED VALVING

The program module is wired to the valve and mounted on the collector in  
NEMA rated enclosure. The only field wiring necessary is a 110 volt  
circuit to the program module.

#### SLOPED ACCESS DOOR

The bottom sill of all access doors is sloped down at 45°. This prevents  
a dust build-up which spills out into the working area whenever the access  
door is opened.

#### OPTIONAL DOOR HINGING

Man access door can be hinged from either left or right.  
This is accomplished in the field in a matter of minutes  
with a single wrench.

## **A LIST OF OPTIONS FOR AARON PROCESS EQUIPMENT COLLECTORS**

**SANITARY COLLECTORS**      Fully finished, ground and polished without corners or ledges.

**MATERIALS OF CONSTRUCTION**      304 Stainless Steel  
Aluminum  
Others

**COATINGS**      Epoxy  
Teflon  
Customer Specification

**EXPLOSION VENTING**      Spring loaded doors for negative pressure.  
Rupture discs for positive pressure.

**STRUCTURALS**      Indoor installation.  
Outdoor installation.

**PLATFORMING & LADDERS**      Grating platforms conforming to OSHA standards.

**HIGH PRESSURE COLLECTORS**      ASME

For special design, material or coatings other than covered above, please contact our technical advisors.

## **A LIST OF AUXILIARY EQUIPMENT AVAILABLE**

<b>BLOWERS</b>	Fan type full range of sizes
<b>DISCHARGE VALVES</b>	Airlocks Butterfly Valves Screw Conveyors Hopper Sweepers Gate Valves Slide Valves
<b>LEVEL INDICATORS</b>	Variety of types, paddle, probe or diaphragm.
<b>VIBRATORS</b>	Full range of sizes and models.
<b>AIR COMPRESSORS</b>	Full range of sizes and also auxiliary equipment such as dessicant dryer, silencer, filters etc.

**For special material handling equipment or controlling equipment, either new or used, please contact Aaron Process Equipment Company. We will be able to help you.**

**TEMPERATURE AND CHEMICAL CHARACTERISTICS OF YOUR PRODUCT OR  
PROCESS DETERMINES THE CHOICE OF FILTER MEDIA'**

**AARON PROCESS EQUIPMENT COMPANY PROVIDES A COMPLETE LINE OF  
BOTH NATURAL AND SYNTHETIC FIBERS FOR YOU.**

<b>WOOL</b>	<b>Primarily for non-abrasive low temperature installations.</b>
	<b>Temperature range to 175°.</b>
<b>POLYPROPYLENE</b>	<b>Excellent abrasion resistance not affected by moisture.</b>
	<b>Temperature range to 180°.</b>
<b>POLYESTER (DACRON)</b>	<b>Good resistance to most acids and weak alkalis. Good abrasion resistance.</b>
	<b>Temperature range to 275°.</b>
<b>NOMEX</b>	<b>Primarily for high temperature applications.</b>
	<b>Temperature range to 425°.</b>
<b>TEFLON</b>	<b>Not affected by most acids or alkalis. Excellent cake release.</b>
	<b>Temperature range to 450°.</b>

#### **SPECIALS AVAILABLE**

**Grounding Wire In Seam - Siliconizing - Glazing**

## **COLLECTORS AVAILABLE**

### **BIN FILTER SERIES**

**Square units designed for venting bins and silos generally without hopper. Available in sizes from 200 CFM to 3600 CFM.**

### **NUISANCE FILTER SERIES**

**Square or rectangular units designed for venting, filling or dumping operation and exhaust air cleaning in small volumes. Available in sizes from 450 CFM to 12,000 CFM.**

### **FILTER RECEIVER SERIES**

**Round units designed for up to  $\pm 17$  Hg operation such as found in pneumatic conveying systems. General range from 200 CFM to 10,000 CFM. Consult our technical advisers for larger units or higher pressure range from 10" to 30" W.G. as required.**

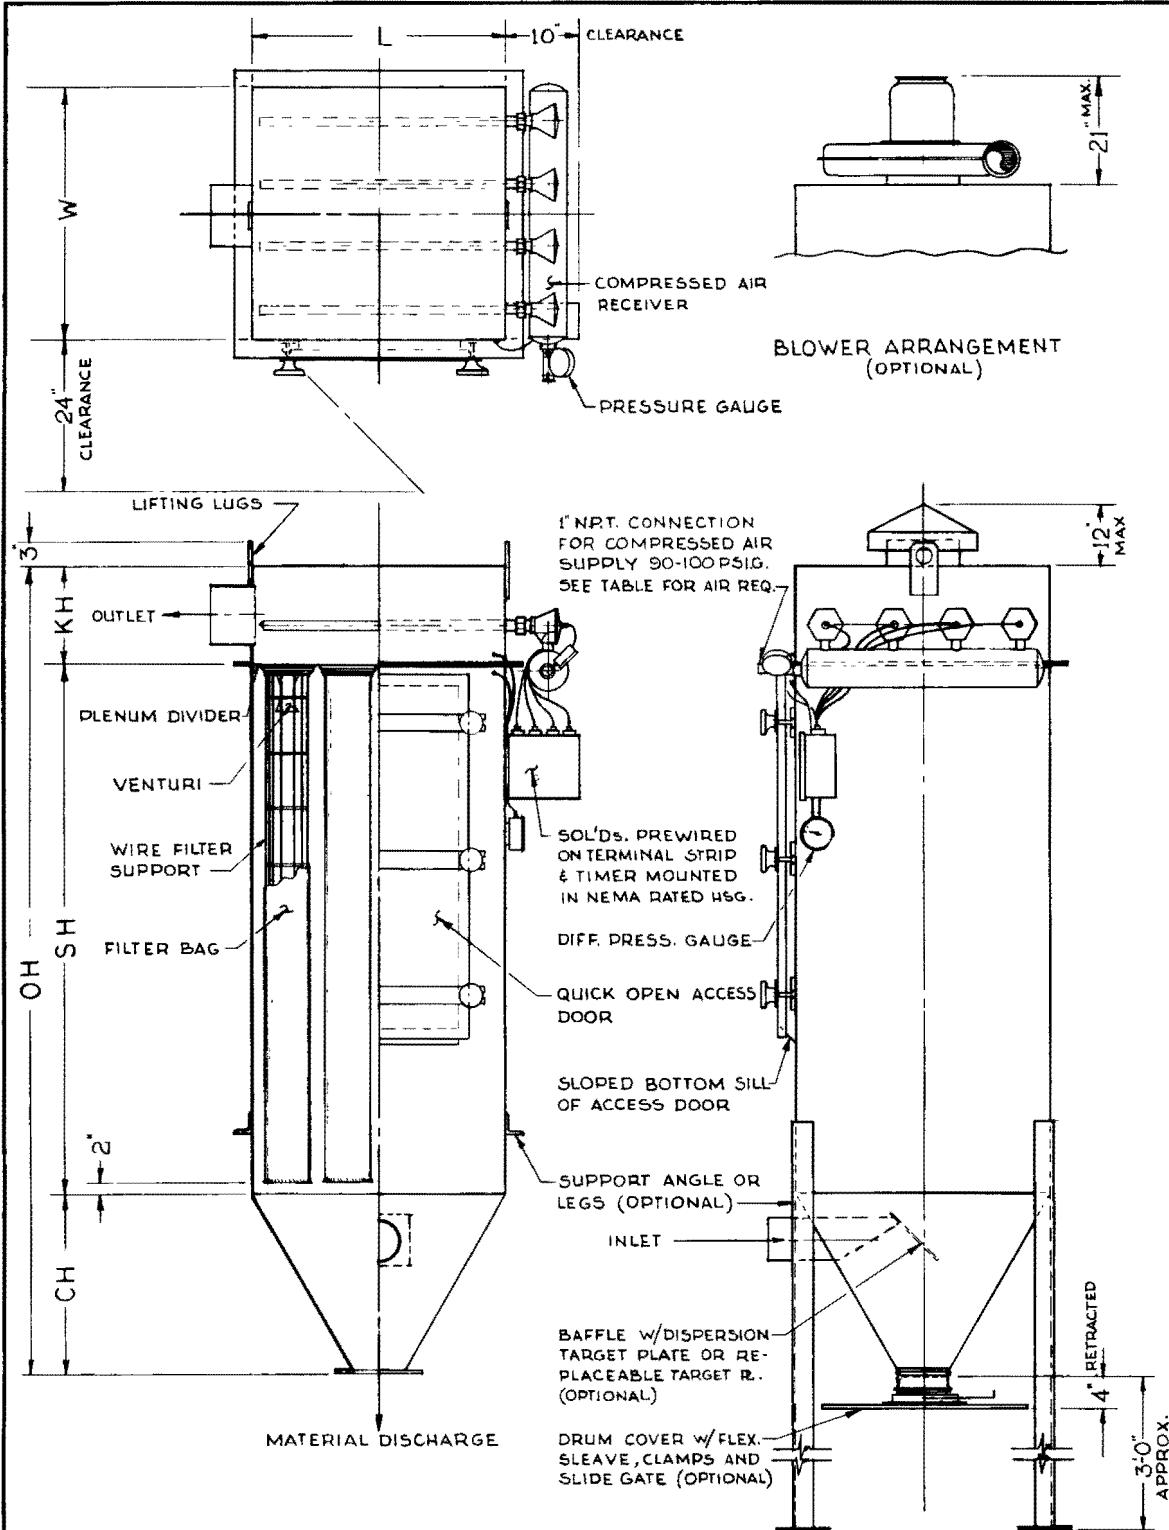

### **BAG HOUSE SERIES**

**Rectangular construction for handling large air volumes from dryers, process systems or exhaust air cleaning with a pressure range from 10" to 30" W.G. as required. Available from 12,000 CFM and up.**

### **SHAKER SERIES\***

**Modular Mechanical Shakers for light dust loading. May be used singly or in groups for intermittent operation and in groups with valving to provide a continuous dust collector system.**

**\* All other series of the pulse jet type and are continuous cleaning. Shaker series require a stoppage of the airflow before activating the bag cleaning mechanism.**

### NOTES

1. INLET SIZE SHALL BE BASED ON RECOMMENDED 4,000-5,000 FT/MIN. VELOCITY.
2. OUTLET SIZE SHALL BE BASED ON RECOMMENDED 3,000-4,000 FT/MIN VELOCITY.
3. CONE HEIGHT DIMENSIONS ARE BASED ON AN 8" SQ. MATERIAL DISCHARGE OPENING (OTHER SIZES ARE AVAILABLE).
4. COLLECTOR MODELS WITH 49 BAGS AND LARGER SHALL HAVE TWO (2) ACCESS DOORS.
5. COMPRESSED AIR CONSUMPTION ASSUMES PROPER SIZING OF DUST COLL.
6. TOP MOUNTING OF BLOWERS, AS SHOWN ON THE DRAWING, IS LIMITED TO 2500 CFM @ 6" S.P. OTHER RATINGS WITH DIFFERENT BLOWER ARRANGEMENTS ARE AVAILABLE.
7. THIS DRAWING TO BE USED FOR GENERAL ARRANGEMENT AND ENGINEERING ONLY, NOT TO BE USED FOR CONSTRUCTION UNLESS IT IS CERTIFIED.

# AARON Dust Collectors!

## NF SERIES

### GENERAL DATA—FILTER RECEIVERS

Design Pressure	±17" WC
CFM Range	150 to 10,000 CFM
Configuration	Square
Construction	All welded 12 gauge

### THE NUISANCE FILTER

The nuisance filter series is a series of square or rectangular low pressure collectors for low to medium volumes of air. These are provided in all welded construction and when the width exceeds 35", a bag free area can be provided for permanent or temporary platforming (available at additional cost).

These units are generally shipped in one piece unless installation limitations require smaller components.

If structural supports are provided, we will generally weld the legs directly to the tanks unless shipping becomes a problem.

As with all other units, bags, cages and auxiliary equipment will be shipped loose for field installation. All efforts will be made to ship collector and parts on one truck for ease of receiving.

### UNIQUE FEATURES—STANDARD ON ALL AARON DUST COLLECTORS

- PATENTED POSI-SEAL bag connection requiring no hand or power tools for installation (U.S. Patent No. 3856 489)
- Steel venturis
- Coated internal hardware. Teflon parts for corrosive applications
- Timer and air headers are shipped assembled on unit
- Access doors are hinged and can be field adjusted for either left or right hand opening
- Access doors with sloped bottom sill to reduce dust build-up on door frame

### THE BASE PRICE OF AARON DUST COLLECTORS INCLUDES:

- Complete housing
- Primed Exterior
- Stub inlet and outlet
- Internal diffusion baffle
- Flanged dust discharge
- Large man service door
- Clean air plenum access port (additional cost)
- Choice of solid state or mechanical solid state timing device
- One set of 15-16 oz. Dacron felt filter elements (other materials available depending on application)
- Nema IV electricals (explosion proof available at additional cost)
- Pressure indicator gauge
- Pressure differential gauge

# AARON Bag Dump Stations!

## BD SERIES

### BAG DUMP STATION

The AARON bag dump station is a self contained dump hopper with a continuous cleaning dust collector and blower incorporated as a single unit.

Units are available in carbon steel, epoxy, 304 or 316 stainless materials or in combinations of the above.

These units are generally shipped in one piece unless installation limitations require smaller components.

Structural supports are provided. The legs will be welded directly to the hopper.

As with all other units, bags, cages and auxiliary equipment will be shipped loose for field installation. All efforts will be made to ship Dump Station and parts on one truck for ease of receiving.

### OPTIONAL FEATURES AVAILABLE ON AARON DUMP STATIONS

- Dump Station only (no filter)
- Filter regulator
- Interior welds ground and polished
- Pneumatic vacuum pickup at discharge
- 10" blow through airlock for positive pick-up systems
- Side mount blower (for low head room)
- Door for dump opening
- Manual control on Dust Collector

### THE BASE PRICE OF AARON DUMP STATIONS INCLUDE:

- 36" high work table
- Angle iron legs
- 36" x 18" dump opening
- Complete dust collector (pulse-jet type)
- Direct drive blower, 3HP 220/440v. 3 phase motor (starter not included)
- Flanged material discharge
- Finish coat of paint on exterior
- Outlet damper and screen on blower
- 14½" clearance below discharge flange

# AARON Dust Collectors!

## BF SERIES

### GENERAL DATA—BIN FILTERS

Design Pressure	± 17" WC
CFM Range	150 to 10,000 ACFM
Configuration	Square & Rectangular
Construction	All welded 12 gauge

### THE BIN FILTER SERIES

The bin filter series is a series of square collectors having no hopper but terminating in an angle flanged housing. Their primary application is venting bins, silos or other dust storage vessels. The predominant feature of this collector is that the open bottom serves as an inlet and material discharge whereas the material storage vessel contains the special inlet.

These units are generally shipped in one piece unless installation limitations require smaller components.

As with all other units, bags, cages and auxiliary equipment will be shipped loose for field installation. All efforts will be made to ship collector and parts on one truck for ease of receiving.

### UNIQUE FEATURES—STANDARD ON ALL AARON DUST COLLECTORS

- PATENTED POSI-SEAL bag connection requiring no hand or power tools for installation (U.S. Patent No. 3856 489)
- Steel venturis
- Coated internal hardware. Teflon parts for corrosive applications
- Timer and air headers are shipped assembled on unit
- Access doors are hinged and can be field adjusted for either left or right hand opening
- Access doors with sloped bottom sill to reduce dust build-up on door frame

### THE BASE PRICE OF AARON DUST COLLECTORS INCLUDES:

- Complete housing
- Primed Exterior
- Outlet weatherhood
- Large man service door
- Choice of solid state or mechanical solid state timing device
- One set of 15-16 oz. Dacron felt filter elements (other materials available depending on application)
- Nema IV electricals (explosion proof available at additional cost)
- Pressure indicator gauge
- Pressure differential gauge
- Bag safety grid

### NOTES:

1. INLET SIZE SHALL BE BASED ON RECOMMENDED 4,000-5,000 FT./MIN. VELOCITY.
2. OUTLET SIZE SHALL BE BASED ON RECOMMENDED 3,000-4,000 FT./MIN. VELOCITY.
3. CLEAN AIR PLUNER HEIGHT IS DETERMINED BY OUTLET O.D. (MINIMUM HEIGHT 10")
4. CONE HEIGHT DIMENSIONS ARE BASED ON AN 8"-I.D. MATERIAL DISCHARGE FLANGE (OTHER SIZES ARE AVAILABLE).
5. COLLECTOR MODELS OVER 3'-0" Dia. SHALL HAVE INTERNAL SERVICE PLATFORM
6. COMPRESSED AIR CONSUMPTION ASSUMES PROPER SIZING OF DUST COLLECTOR.
7. UNITS OVER 8'-0" Dia. ARE AVAILABLE, CONTACT EVO CORP.

# AARON Dust Collectors!

## FR SERIES

### GENERAL DATA—FILTER RECEIVERS

Design Pressure	± 17" Hg
CFM Range	150 to 20,000 ACFM
Configuration	Cylindrical
Construction	All welded 12 gauge to ¼" plate

### THE FILTER RECEIVER SERIES

The filter receiver series are cylindrical collectors generally used where higher pressures are necessary (± 17" Hg static). The Aaron filter receivers are unique in that bag free areas are available for easier servicing. Units over 3 feet in diameter provide a clear area at the door for permanent or temporary service platforming.

Our standard line of cylindrical units stop at 8" in diameter because of standard shipping limitations. Larger diameters are available upon request to the home office.

These units are generally shipped in one piece unless installation limitations require smaller components.

If structural supports are provided, we will generally weld the legs directly to the tanks unless shipping becomes a problem.

As with all other units, bags, cages and auxiliary equipment will be shipped loose for field installation. All efforts will be made to ship collector and parts on one truck for ease of receiving.

### UNIQUE FEATURES—STANDARD ON ALL AARON DUST COLLECTORS

- PATENTED POSI-SEAL bag connection requiring no hand or power tools for installation (U.S. Patent No. 3856 489)
- Steel venturis
- Coated internal hardware. Teflon parts for corrosive applications
- Timer and air headers are shipped assembled on unit
- Access doors are hinged and can be field adjusted for either left or right hand opening
- Access doors with sloped bottom sill to reduce dust build-up on door frame

### THE BASE PRICE OF AARON DUST COLLECTORS INCLUDES:

- Complete housing
- Primed Exterior
- Stub inlet and outlet
- Internal diffusion baffle
- Flanged dust discharge
- Large man service door
- Clean Air plenum access port
- Choice of solid state or mechanical solid state timing device
- One set of 15-16 oz. Dacron felt filter elements (other materials available depending on application)
- Nema IV electricals (explosion proof available at additional cost)
- Pressure indicator gauge
- Pressure differential gauge

- CONTINUOUS AUTOMATIC CLEANING

- NO INTERNAL MOVING PARTS

- EASY MAINTENANCE

- HIGH EFFICIENCIES—MEETS ALL CODES

- IN STOCK—IMMEDIATE DELIVERY

# Look to the Best...for the Best!

# AARON ROTARY VACUUM DRYERS

## "BEST BUY IN THE INDUSTRY"

Aaron rotary vacuum dryers are designed for quick, complete uniform and economically low temperature drying of materials that may be mixed or tumbled while drying, such as pharmaceutical products, fine chemicals, dyes, shellac, explosives, resins, etc. Also, they may be used as extractors in certain cases and then as vacuum drying and solvent recovery units, thus saving handling and the need for separate extractors.

Types of agitation available includes double-spiral ribbons, broken ribbons and plow type (which lifts and turns the charge).

The specs for the new T304SS rotary vacuum dryer with dimple jacket are: vessel FV @ 350F. Dimple jacket 150 psig @ 350 F, test. Built with 20" manway, 12" center bottom discharge flange. 2-6" flanged fittings in top. Paddle agitator. Agitator speed of 5-10 rpm to suit customer need. (10-25 HP drives).

SIZE	WORKING CAP.	FULL CAP.
4' x 10'	75 Cu. Ft.	113 Cu. Ft.
4' x 13'	90 Cu. Ft.	135 Cu. Ft.
4' x 15'	115 Cu. Ft.	170 Cu. Ft.
4' x 20'	150 Cu. Ft.	226 Cu. Ft.

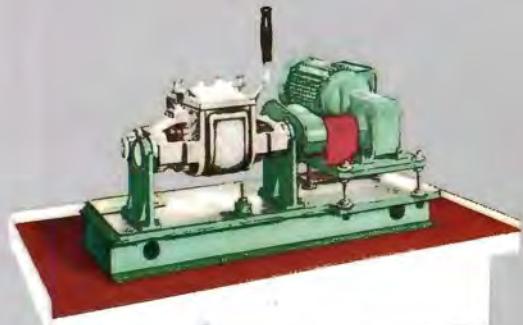

Working capacity based on  $\frac{1}{2}$  full. Coded vessels can be supplied at slightly higher cost. Ribbon agitator can also be supplied. Extra for T316SS contact parts.

- **BLADES**—Sigma blades are of cast steel and are arranged to operate in a tangential path. The front and rear blades operate at 30 and 17 rpm respectively, thus affording complete mixing action. The blades are driven from one end. Gears are encased in a steel, oil bath guard.
- **BEARINGS**—The Aaron mixer comes equipped with spherical roller bearings and is readily cleaned with removable split type shaft stuffing boxes.
- **DISCHARGE**—Discharge is accomplished by tilting the bowl with twin hydraulic cylinders, activated by either a manual or a solenoid valve mounted on the hydropack. The weight of the Aaron mixers, less the motor, is approximately 40,000 lbs. thru 85,000 lbs.
- **ADD ONS**—A lower horsepower jogging motor can be provided on request. Consult your Aaron Process Equipment Company representative. All mixers are capable of full vacuum service with the addition of a separate vacuum cover kit.

**GALLON  
double arm  
tilt mixers**

- **HEAVY-DUTY**
- **SIGMA BLADE DESIGN**

• **FEATURES**—Featuring sigma-blade design and working capacities of 300 to 600 gallons. These machines have been well received because they are engineered for most heavy-duty applications.

• **DRIVE**—These mixers are capable of handling up to 400 horsepower, depending on the model. The front blade is directly connected thru a gear coupling to a speed reducer. Speed reducers can be either belt driven or directly coupled to the electric motor.

• **BOWL**—The mixing bowl is fabricated from 1 1/4 inch type A36 carbon steel, and is fitted with a jacket (200 psi @ 450 F horizontal serpentine). Internal surfaces of the double-arm mixer are line bored for minimum clearances of 1/8 inch between bowl and blade. The bowl tilts over front blade thru bronze bearings by twin hydraulic cylinders. Other materials of construction and inside finishes are available.

• **Weight**—40,000 lbs. thru 85,000 lbs.

ality . . .

# AARON

ity and homogeneous, accurate  
ular, heavy density cakes, plastics  
. Engineered and constructed for  
rugged, heavy-duty production.  
Aaron Process Equipment Com-  
pany Mixers are completely de-  
pendable. Their tough, all-steel  
construction is fully welded for  
maximum strength, rigidity and to  
meet sanitary requirements.

All machine surfaces are clean  
and smooth for sanitation purposes  
and minimal waste. Contents  
can't cake or stick because the  
chamber interior is slick and level.  
There are no projecting screws,  
nuts, bolts, pockets or ledges and  
all corners are rounded to help  
eliminate material build-up which  
may cause contamination.

Anti-friction bearings in self aligning pillow blocks assure a free, smooth and quiet running operation. Discharge of the finished batch is quick and clean through a choice of positive shear gate or butterfly valve that provides for complete or throttle discharge. Other types of discharge valves are also available. The Aaron standard of highest quality and precision engineering is built into every mixer. Aaron Ribbon mixers unique features make them the leaders in the field.

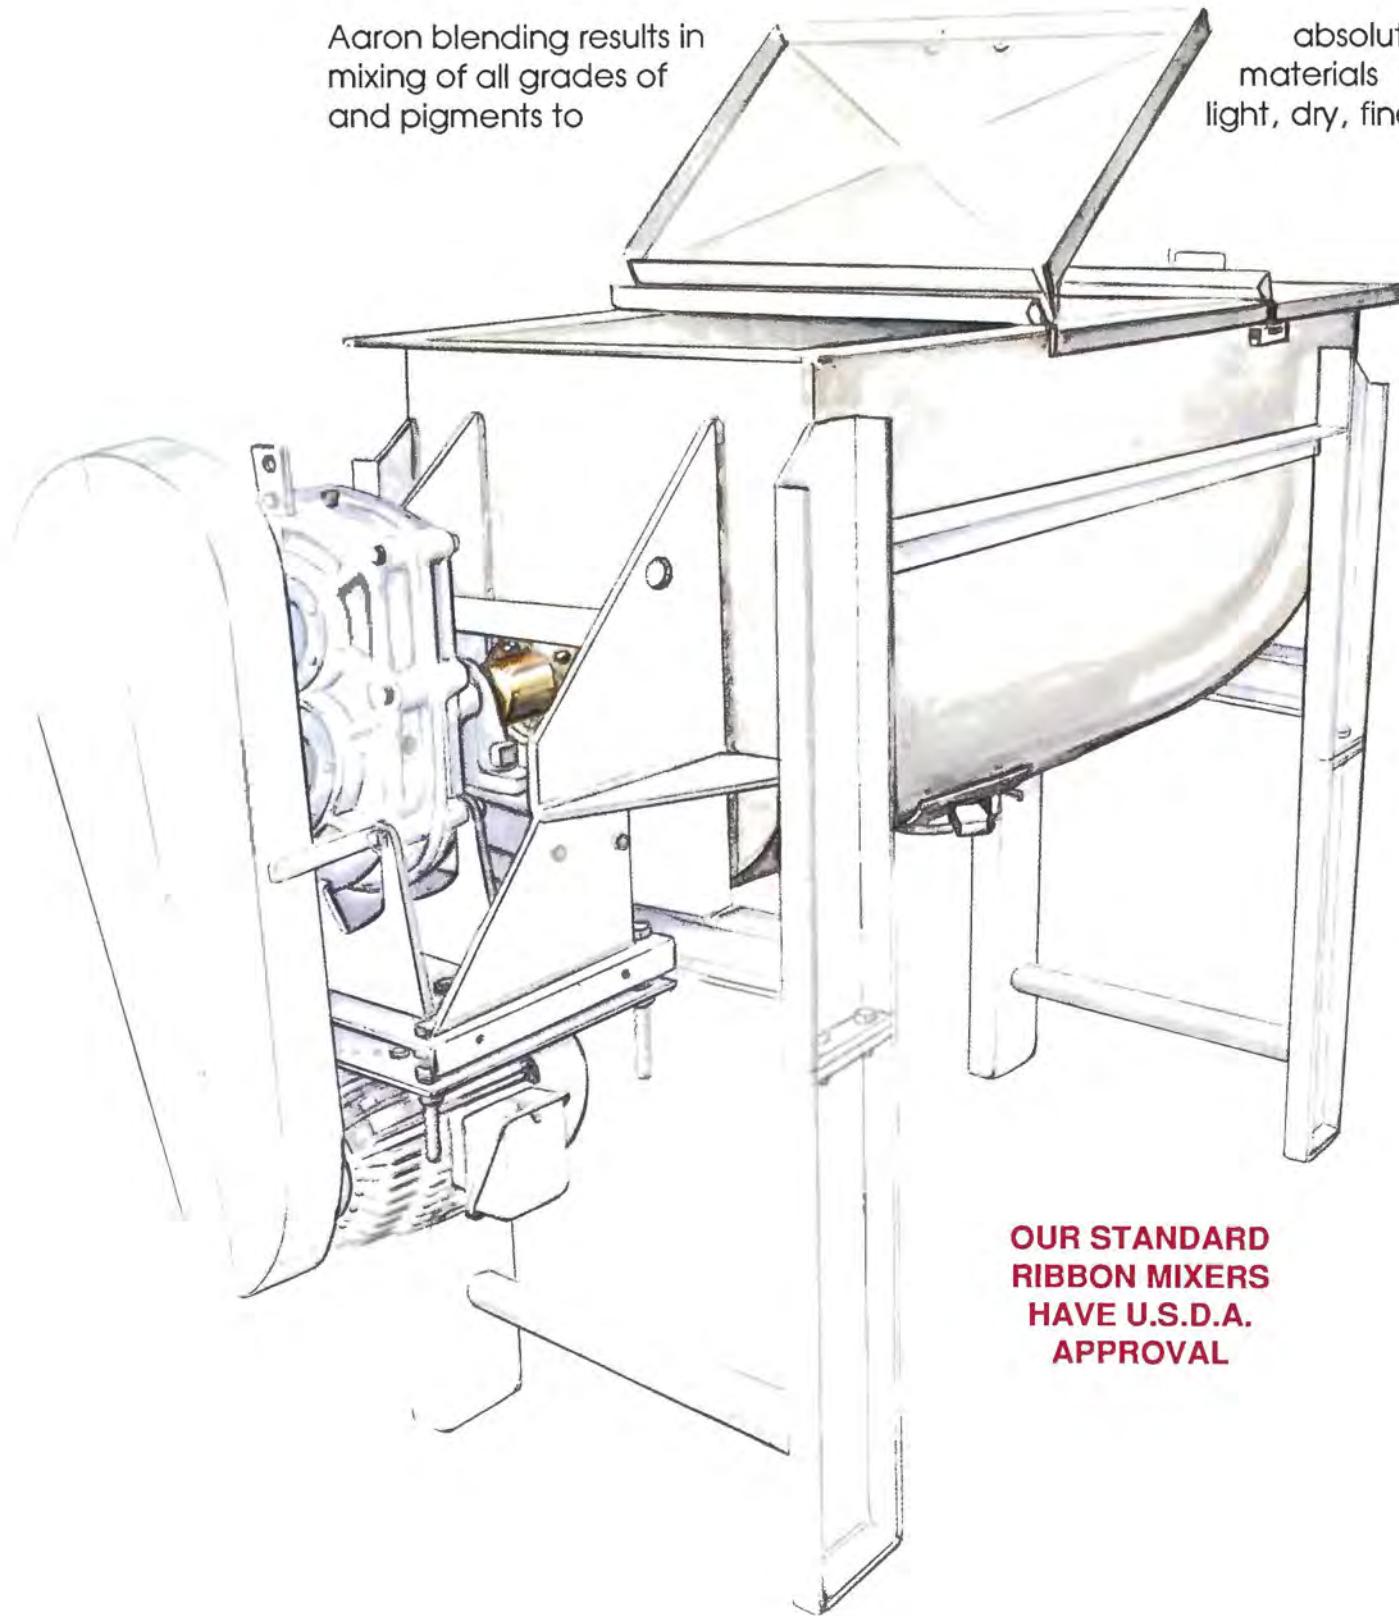

Aaron's split gland is the best available design to meet the most rigid standards for sanitary servicing. Available with various packing materials to meet your requirements. Glands open into four pieces allowing access to the shaft and the end plate for easy cleaning. Dimpled jackets are available on all Aaron Mixers for steam, hot water or oil, if specified. Jackets can be built to ASME code.

# **NEW ONE GALLON LAB MIXER**

**GREAT FOR RESEARCH AND  
DEVELOPMENT:**

**PLASTICS • FOODS • CHEMICALS •  
PHARMACEUTICALS •  
COSMETICS • ETC.**

**Model "B"**

AARON PROCESS EQUIPMENT COMPANY MANUFACTURES A ONE GALLON (AND A ONE QUARTER GALLON) LAB MIXER FOR TESTING PROTOTYPE MATERIALS AND DETERMINING EXACT MIXING RATIOS OF MATERIAL COMPONENTS PRIOR TO FULL PRODUCTION RUNS.

OUR LAB MIXERS HELP TAKE THE GUESS WORK OUT OF LARGE PRODUCTION COMMITMENTS AND AID OUR CUSTOMERS IN THEIR RESEARCH AND DEVELOPMENT PROJECTS.

**STANDARD WITH ONE GALLON AARON PROCESS EQUIPMENT LAB MIXER:**

**Bowl:** Constructed of T304 SS material (standard units) and line bored thru working segments to maintain bowl to blade clearances. Polished interior. Working capacity of 1 gallon; total capacity of 2.3 gallons.

**Mixing Blades:** Standard units furnished with heavy duty tangential sigma blades in cast T304 SS machined and polished. Blade bearings are permanently sealed ball bearings eliminating the need for periodic lubrication. Driven via one side thru 2" face gears.

**Tilting Mechanism:** Manual tilt over front journal stanchions with tilt handle. Pivot bearing constructed of oil impregnated bronze eliminating the need for periodic lubrication.

**Jacket:** Designed for 150 psi at 400 F with internal cross over baffle to insure positive and even distribution of heating/cooling transfer materials. ASME units available as an option.

**Drive:** 2 hp/80 v DC motor completely wired to cover activated limit switch and 230 v single phase AC controller with forward/reverse, run/jog and start/stop buttons. Arranged to provide 0-70 rpm on the fast (driver) blade.

**Cover:** Suitable for dust and/or vacuum. Constructed of T304 SS material complete with Buna-N gasket, handles, (2) 1/4" NPT ports and (2) sight glasses.

**Among the many safety features are:** Lid activated limit switch, renders machine inoperable without cover in place; spring loaded anti-tilt plunger; enclosed gears & drive coupling; and graphic warning/caution labels.

### NOTES

- 1 INLET SIZE SHALL BE BASED ON RECOMMENDED 4,000-5,000 FT/MIN VELOCITY.
- 2 OUTLET SIZE SHALL BE BASED ON RECOMMENDED 3,000-4,000 FT/MIN VELOCITY.
- 3 CONE HEIGHT DIMENSIONS ARE BASED ON AN 8" SQ. MATERIAL DISCHARGE OPENING (OTHER SIZES ARE AVAILABLE).
- 4 COLLECTOR MODELS WITH 49 BAGS AND LARGER SHALL HAVE TWO (2) ACCESS DOORS.
- 5 COMPRESSED AIR CONSUMPTION ASSUMES PROPER SIZING OF DUST COLL.
- 6 TOP MOUNTING OF BLOWERS, AS SHOWN ON THE DRAWING, IS LIMITED TO 2500 CFM @ 6" SP. OTHER RATINGS WITH DIFFERENT BLOWER ARRANGEMENTS ARE AVAILABLE.
- 7 THIS DRAWING TO BE USED FOR GENERAL ARRANGEMENT AND ENGINEERING ONLY, NOT TO BE USED FOR CONSTRUCTION UNLESS IT IS CERTIFIED.

### NOTES:

1. INLET SIZE SHALL BE BASED ON RECOMMENDED 4,000-5,000 FT./MIN. VELOCITY.
2. OUTLET SIZE SHALL BE BASED ON RECOMMENDED 3,000-4,000 FT./MIN. VELOCITY.
3. CLEAN AIR PLENUM HEIGHT IS DETERMINED BY OUTLET O.D. (MINIMUM HEIGHT 10")
4. CONE HEIGHT DIMENSIONS ARE BASED ON AN 8" I.D. MATERIAL DISCHARGE FLANGE (OTHER SIZES ARE AVAILABLE).
5. COLLECTOR MODELS OVER 3'-0" DIA. SHALL HAVE INTERNAL SERVICE PLATFORM
6. COMPRESSED AIR CONSUMPTION ASSUMES PROPER SIZING OF DUST COLLECTOR.
7. UNITS OVER 8'-0" DIA. ARE AVAILABLE, CONTACT EVO CORP.
