Tablet Filling – Swiftcount

Swiftpack SwiftCount Electronic Counter

The SwiftCount bench-top tablet counter is designed to feed and count any size, shape or quantity of tablets without change parts, in batches of 2 to 9,999. Designed for ease of operation, the SwiftCount incorporates a similar microprocessor package to that used on the high speed Swiftpack counting machines, achieving the same high level of accuracy and reliability.

The Swiftcount can also be automated with the addition of our automatic container indexing system.
