

# Linium 303

## Dwell Head Horizontal Wrapper

### Overview

- The Linium 303 horizontal flow wrapper offers the Tite-Pack™ dwell head design, which allows the end-seal crimpers to travel with the film. Long dwell time provides high-integrity seals on heavy gauge and laminate film structures required for some food packaging and pharmaceutical packaging. Long or extended dwell time packaging also adds shelf life to bakery items and provides moisture or light protection to photographic film or coffee packets. Extended or long dwell packaging assists with moisture containment in moist/wet wipe products.

### Facts

- High pressure long dwell end seal unit produces hermetically sealed packages.
- 4 fin wheel units (1-cold, 2-hot, 1-auxiliary fold-over) assure longitudinal seal quality.
- 3 servo motors (in-feed, fin wheels, cutting head) minimize mechanical parts.
- Electric eye for registered film.
- Pre-programmable product packaging set-up for 20 products, including package length, speed, crimper dwell and product position simplifies wrapper change-over.
- Food grade product contact parts.
- Many flow wrapper options available, including automatic feeding and product handling.
