

Lakso® 300 Cottoner

The Lakso® 300 cottoner utilizes an inverted “U” technique of inserting cushioning material into containers. This technique ensures that bottles are well packed and helps maintain product integrity by allowing for a cleaner packing process which eliminates stray wisps of cotton.

Specially angled shears cut coil cleanly and uniformly each time to remove any potential for tails or wisps - a feature exclusive to Lakso® cottoners.

The Lakso® 300 cottoning machine can achieve speeds up to 300 bottles per minute with a feedscrew bottle indexing system.
