A Basic Economic Filler The Model B-150 Auger Filling Machine combines simplicity, reliability and economy for an extremely versatile addition to almost any packaging operation. It will cleanly dispense literally hundreds of products in pre-selected volumes from 1 oz. to 50 lbs. or more when fitted with interchangeable tooling selected from a wide variety of standard augers, pump and cut-off assemblies.

Easy Set-Ups with Digital Display on 4 liquid crystal windows that are pre-set on a sealed membrane keypad. Filling modes and controls of machine functions are simple toggle switch selections. For example: the slow-speed agitation mode may be selected to be either "off," "on" continuously or "on" during fill cycle to provide the most efficient dispensing dependent upon the product's properties. Also, the Automatic Recycle Time mode can pace the operator for maximum output with an adjustable time delay from 1 to 10 seconds between fills.

Fig. 1 Model B-150 with 10 gal. plain cone hopper & split cover. Mounting base may be either cast aluminum floor base or 10" Diam. cast bench base.
