BODOLAY MODEL P61 FILL AND SEAL MACHINE

The P61 Fill and Seal Machine with PLC Controls is capable of using any pre-made pouch to fill and seal automatically.

The unique design of the machine eliminates the need for change over set-up of the machine. The P61 will pick up the pouch (from 4" x 6" up to 16" x 19" size) without making any changes to the machine. Only the infeed conveyor will need to be adjusted to the different pouch size, which only takes 2-3 minutes. Optional automatic set up for the infeed system is available.
