WEPACKIT ^{MPM}350 CASE PACKER

PLASTIC, GLASS, METAL, CARTON
AND OVER WRAPPED PRODUCTS

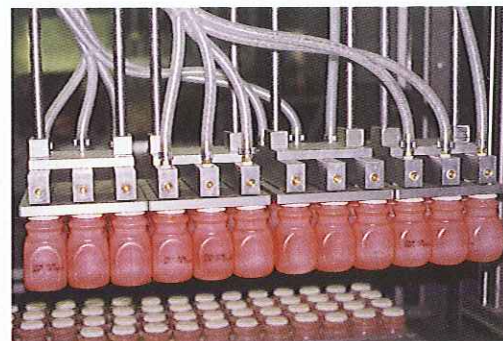

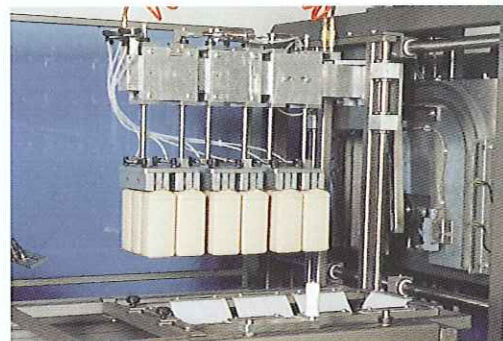

MULTIPLE TIERS
WITH LAYER PADS

“THE UNUSUAL IS OUR STANDARD”

MODEL 350 CASE PACKER

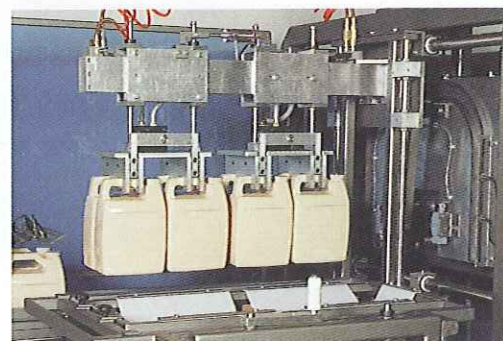

Wepackit Case Packers are designed to reliably soft pack plastic, glass, metal or composite containers, with or without a variety of dividers. Cases can be packed with ease in single or multiple tiers. The standard machine can handle a wide range of products, from one ounce to two and one half gallons by using mechanical grip heads, vacuum cups or squeeze grips. This can all be accomplished on the same frame, with the capability to handle corrugated RSC's, HSC's and trays.

The simplicity of this economic and rugged machine ensures longevity and requires minimal preventative maintenance. Combined with a Wepackit Case Erector, or a Trayformer, and a Wepackit Case Sealer; we offer complete systems to fulfill all your packing needs.

STANDARD MACHINE FEATURES

- Includes one set of "QUICK" change parts, to pack one or more products
- Fast changeover time averages 10-15 minutes
- Control by Omron Programmable Controller, solid state electronics (versatile, trouble free)
