

Fuji Seal Machines

Fuji Seal FS 400

Specifications

Speed
up to 750 ppm

Sleeve gauge
35-70 micron

Change-over
< 15 min

Information

The Fuji Seal 400 platform is a modular platform and can be configured for low-, medium- and high speed requirements. This platform therefore is suitable to grow with your business as this machine platform can be easily upgraded in the field.

The FS 400 range shows a merge of all Fuji Seal technologies, years of experience and valuable advice from our customers who are using the technology on a daily basis.

The machine design also includes a servo controlled system which allows the rotary cutter to handle a range of product sizes. This way the required product related parts and it's related investment are reduced.

The machine development is focused on down-gauging, making it possible to use shrink films below 35 micron. This directly relates to reduced Total Cost of Ownership, packaging waste reduction and smaller carbon footprint.

Unique about Fuji Seal FS 400

 Fast change-over time < 15 minutes

 Low noise < 75dBA

 Speed up to 750ppm

 Small footprint 9m²
