

MC-MAX

60 CPM, 10 Fillers, 2 Seamers, **Overkill is Underrated**

Machine Features

DIGITAL OVERFILL

Allows for precision fills that can be adjusted, on the screen, in real time.

UNDER-CAP CO2

Applies CO2 right before end application, allowing for maximum CO2 application with minimum oxygen contact for the lowest possible DO levels.

CAN PRE-PURGE

CO2 can be injected into the can before the beverage is dispensed. Real time adjustments allow for a customizable pre-purge.

TWO SEAMER HEADS

Having 2 seamer heads allows for flexibility to run non-stop. If you need to do maintenance, just shut down one seamer and perform maintenance while the other seamer keeps going. This allows for non-stop production.

10 VALVE FILLER SYSTEM

With 2 filling tubes per valve and a total of 20 filling tubes, the MC-MAX produces a tidal wave of cans. Be careful you might get swept away in a wave of cans.

RINSE TUNNEL

An inline rinse and drying tunnel enables clear and mostly dry cans to exit the machine.

SPECS & FEATURES

CONNECTIONS & UTILITIES

DIMENSIONS & WEIGHT

- Up to 60 cans per minute
- CO2 can purge
- Under cap CO2
- Automatic filling
- Automatic purge
- Automatic lid application
