CASE
FORMING

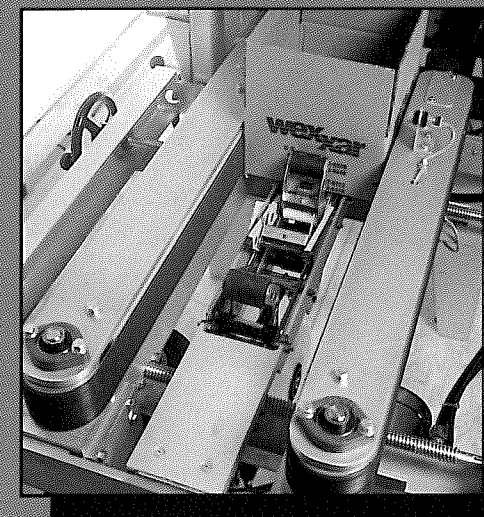

The **WEXXAR WF** Series case formers are versatile and industry proven machines with unique mechanical case forming and bottom flap folding technology. Offering maximum flexibility and performance in the handling of RSC or HSC style cases, the machines are available with a choice of bottom closure systems:

- ❑ Basic model with bottom forming - no seal
- ❑ Bottom forming with cold glue seal
- ❑ Bottom forming with hot melt glue seal
- ❑ Bottom forming with pressure sensitive tape seal

Insert shows **Model WFH** equipped with one of several popular hot melt bottom sealing systems available.

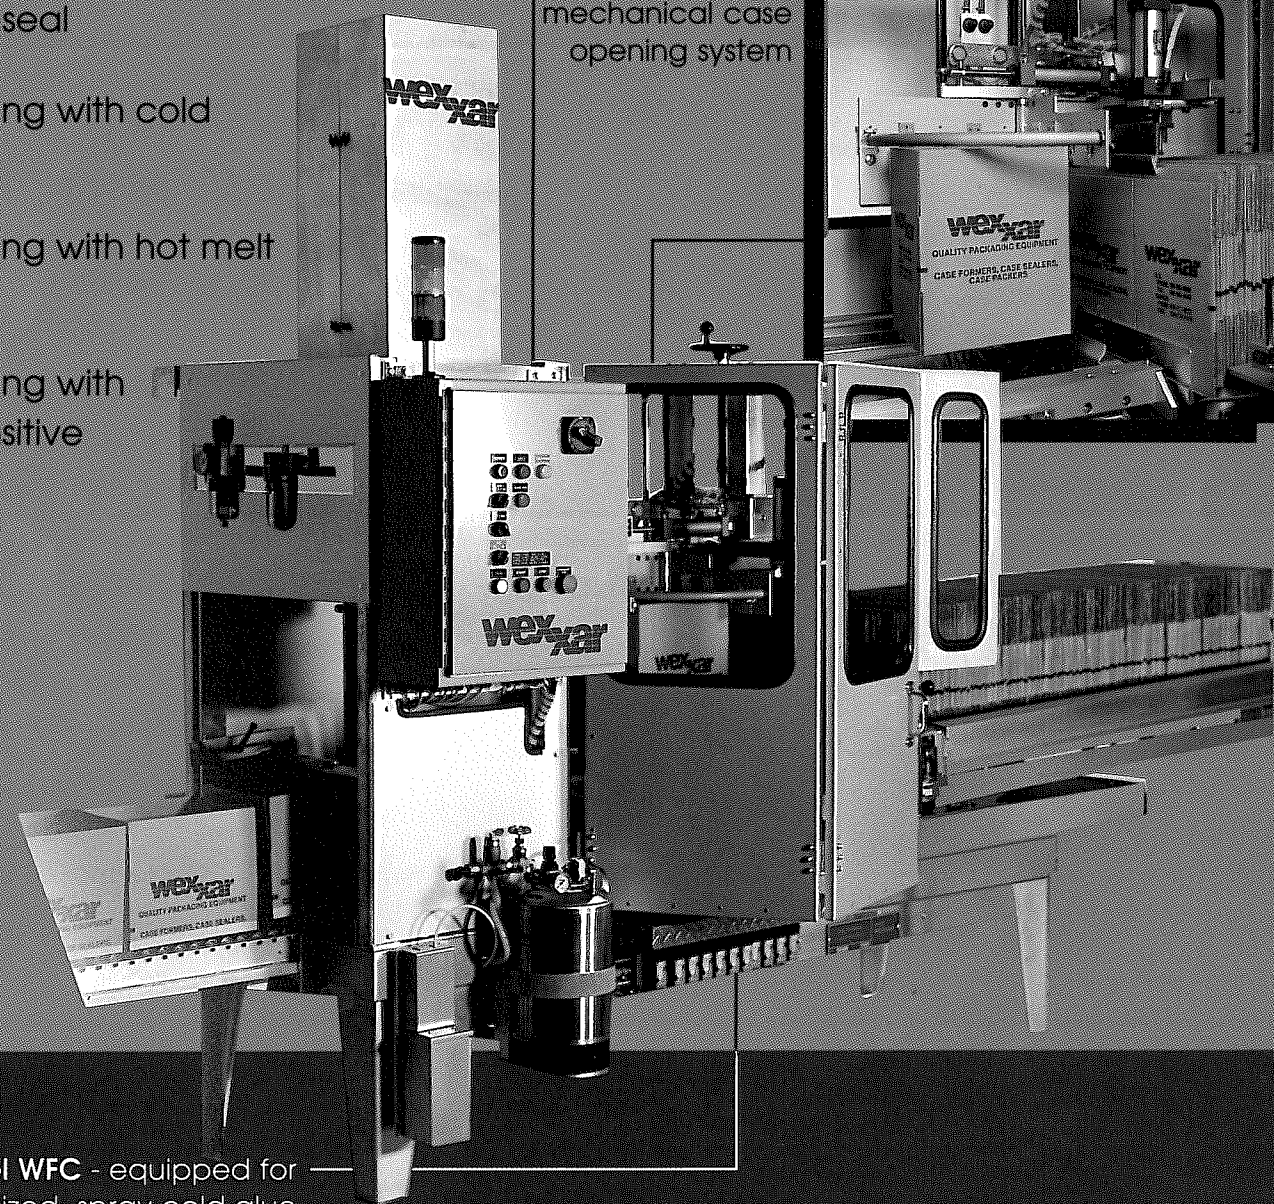

Detail shows **WEXXAR'S** patented mechanical case opening system

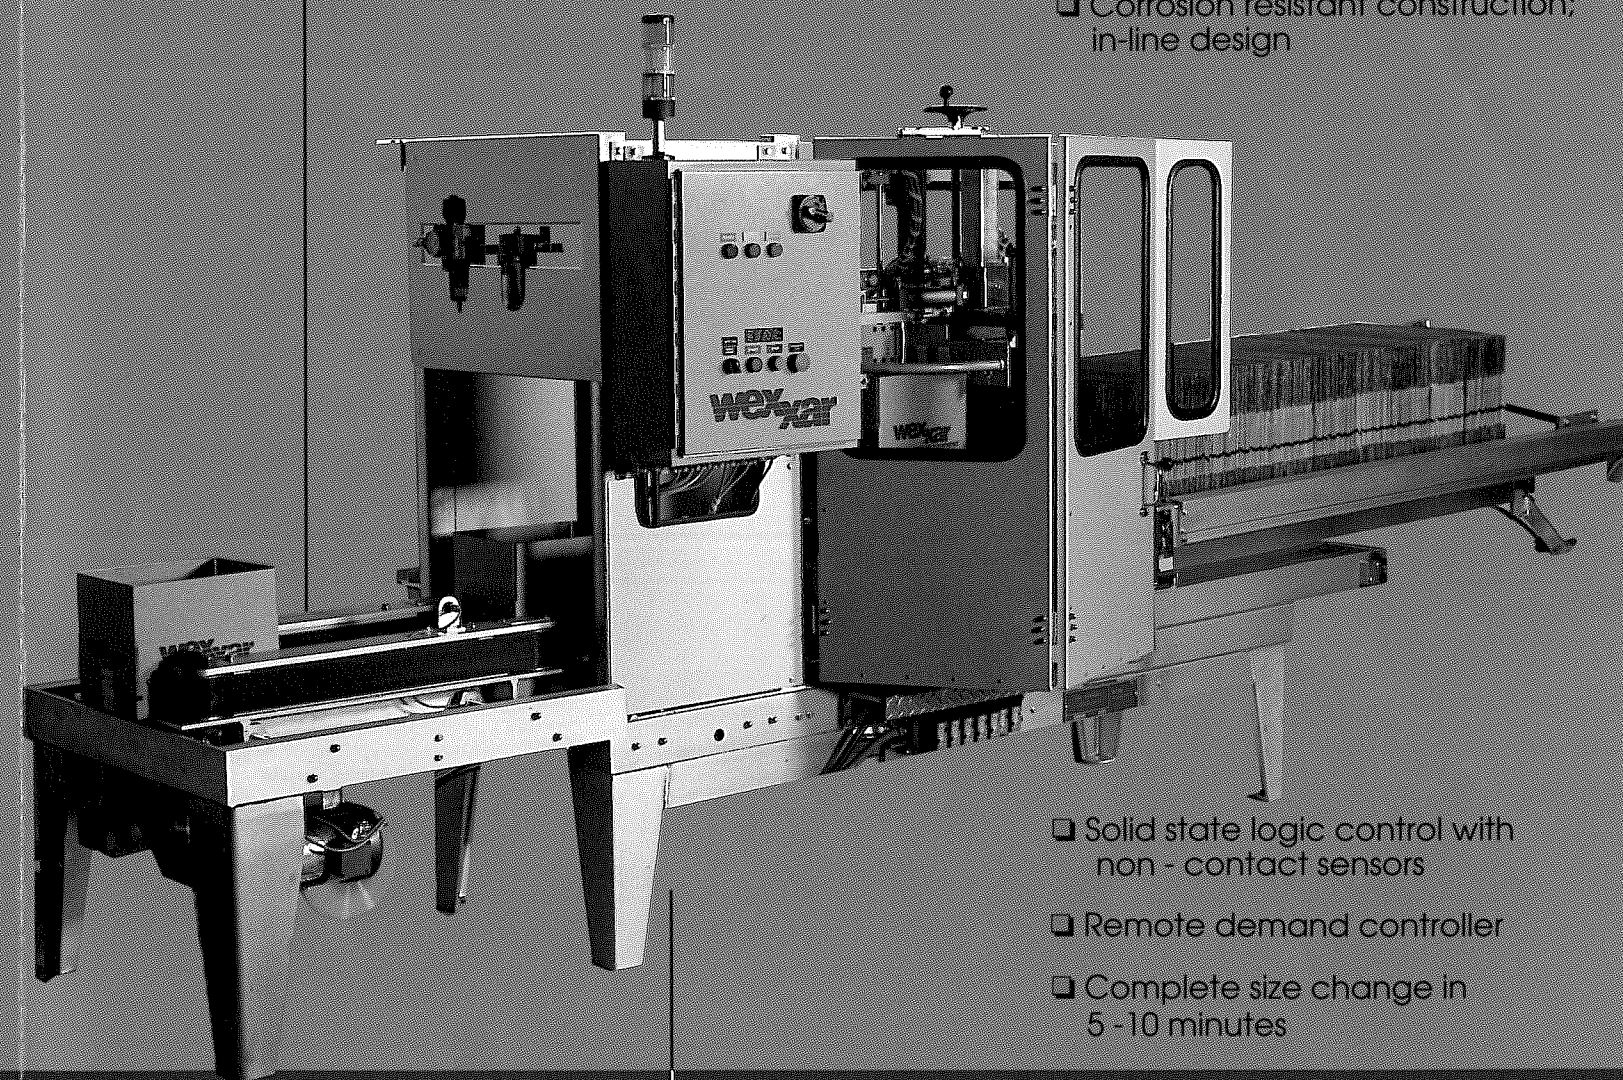

The rugged bottom tapping module of the **Model WFT** delivers precision folded and taped cases around the clock

The **WF** Series case formers are loaded with standard features that make **WEXXAR** the leader in the field:

- ❑ Patented pin-type mechanical case opening; the only case former to offer positive case opening **WITHOUT VACUUM**. Easily accepts marginal quality corrugated board!
- ❑ The largest case feed magazine
- ❑ Corrosion resistant construction; in-line design

Model WFC - equipped for atomized spray cold glue bottom sealing; strongest seal at lowest cost

- ❑ Solid state logic control with non - contact sensors
- ❑ Remote demand controller
- ❑ Complete size change in 5-10 minutes

Model WFT - equipped for pressure sensitive tape bottom sealing. Various makes of tape applicator heads are available.
