

YOUR SOURCE FOR WEIGHING, COUNTING AND PACKAGING SOLUTIONS

Customizable weighing, counting and
packaging machinery solutions

It's the Company Behind the Machine that Makes a Difference.

Ohlson Packaging offers the most comprehensive line of automatic packaging machinery and custom packaging solutions. We offer highly engineered equipment for packaging products into bags, bottles, boxes, pre-made pouches, cups, containers, trays, and MAP systems, specializing in dry foods, fresh foods, and a variety of other non-food items.

Backed by over 50 years of experience, Ohlson Packaging provides complete turnkey solutions for all your packaging needs. Our portfolio includes a broad range of weighing and counting equipment, such as linear net weighing machines, combination weighing machines, and count with weight verification machinery. We offer our weighing machines with container indexing systems, vertical form fill and seal bagging machines, rotary pouch machines for pre-made bags or a semi-automatic line.

At Ohlson Packaging, we pride ourselves in producing rugged equipment with stainless steel construction that can withstand 24/7 operation. Our ability to tailor and modify systems to fit your products' exact packaging requirements is our winning strategy and the backbone of our company.

WEIGHERS AND COUNTERS

Ohlson Packaging's high speed weighing and counting solutions provide important business benefits that boost your bottom line and deliver rapid return on your investment.

Our weighing and counting applications include confectionery, bakery, biscuits, cookies, cereals, fruit pieces, seeds, snacks, chips, flakes, nuts, jellies, pet food, detergent pods, hardware kit packaging, plastic parts, cosmetics, medical devices—virtually any weight or shape.

Linear Weighers

Ohlson Packaging's Stainless Steel Linear Weighing and Counting Systems are an ideal solution for automating your highly repetitive, labor-intensive processes.

These extremely rugged machines will last for years and the modular design allows you to customize and expand your set up as your business grows.

Available in single-lane to eight-lane models, each lane typically does the work of four to five hand packers, allowing you to realize a rapid return on your investment.

DEVELOPERS
OF INNOVATIVE
SOLUTIONS

High Accuracy and High Speed Applications

Multi-Head Weigher and Counter MHW-CW14

Ohlson's multi-head weighers and counters are perfect for a wide array of high accuracy and high speed weighing and counting applications. They are easy to operate, clean and maintain. Our systems will weigh or count your product, then fill your containers with speeds up to 240 cycles per minute and accuracies within a fraction of a gram – among the highest in the industry for performance and reliability.

Available in 10-, 14-, 18- and 24-head configurations featuring stainless steel construction and optional full high pressure wash down capability, these combination weighers will drastically reduce product giveaway growing your bottom line by the day.

BAGGERS

Our line of bagging systems are available in vertical form fill seal machines and rotary pouch machines. At Ohlson Packaging, we understand that the right kind of packaging equipment can greatly help your production sales.

Our vertical form fill seal machines are available in several different models and can be designed to your custom specifications. Three and four sided sealing capability is also available within this category.

Vertical Form-Fill-Seal

Made of stainless steel construction and easy to clean, Ohlson vertical baggers are available in multiple models with speeds from 25 BPM and up to 180 BPM with varying dimensions that fit any facility.

All Ohlson vertical bagging systems feature dual servo control, auto positioning belts, auto film detection, auto centering film spindle, registration control, PLC controls, and color touch screen display.

Easily automate your bagging process with a vertical bagging system.

Pre-Made Pouch Machines

Ohlson is proud to offer the latest advances in pouch machinery. Our machines accommodate a variety of pouch widths from 4" to 14", lengths of 4" to 16" and max speeds of 35 ppm. Whether you utilize flat, stand-up, zipper, slider-zipper or gusset pouch styles, we have a system that will automate the pre-made pouch filling and sealing process.

CONVEYOR AND BUCKET ELEVATORS

At Ohlson Packaging, we understand that efficiency comes in all shapes and sizes, which is why we have a wide array of products to meet all sorts of business needs and industry standards. Our conveyors and material handling components can be customized to your packaging equipment system to deliver product on time, every time.

Bucket Elevators

Easy to clean and space efficient, this elevator is a great tool for those who need to deliver their product vertically for weighing and/or counting. Synchronized with your scale and packing machine, it creates a continuous supply of product from floor level for final packaging.

Features include stainless steel chain and bearings, easy access doors for cleaning, safety interlock sensors on access doors, automatic stop and start sensor controls while filling and simple tool-less removal of buckets. Increase accuracy and efficiency by combining our Vertical Bucket Elevator with an Ohlson weighing and packaging machine.

Create a Seamless Supply and Packing System

Customized Index Conveyors

Ohlson's customization and engineering capability provides seamless integration of the packaging process when required. Custom Indexing conveyors can automatically present the containers under the single or multiple discharge chutes from the scales and move them downstream for final closing and/or labeling. From there the container is ready for manual or automatic case packing to complete the process.

Conveyors

Ohlson's stainless steel construction takeaway conveyors used in conjunction with VFFX or ROFS baggers, deliver the finished package to working height level for manual case packing or continuation to an automated case packing system. Other features include our heavy duty food grade plastic belt, and full flexible frame that allows interfacing with existing conveyance systems for further handling.

METAL DETECTORS AND CHECK WEIGHERS

When it comes to the food industry, machines such as industrial food metal detectors and check weighers play a critical role in quality assurance. The Department of Agriculture Weights and Measures, as well as other audit processes and government organizations, have strict regulations and industry standards in place that businesses must be in compliance with at all times.

At Ohlson Packaging, we know just how important these quality control machines are to businesses and consumers alike as they help to ensure consumer safety by checking products before they're distributed to the public. We provide food metal detectors, weighers, and many other machines that help businesses increase the efficiency of their supply chain while also meeting all of the mandatory standards and regulations.

These food metal detectors and quality control systems are invaluable additions to any weighing and bagging solution.

EQUIPMENT

Product Inspection and Quality Control Systems

Metal Detectors

Metal detectors play an integral role in the overall quality assurance process when packaging food products. Ohlson's metal detection machines are highly sensitive to the presence of metal in any of the food products moving through the packaging system. In cases where metalized bags or containers are used, Ohlson Packaging provides "fall through" metal detection to assure detection and halt the system.

Ohlson provides check weighers and metal detectors as well as many other methods that help businesses increase the efficiency of their product packaging while also meeting all the mandatory standards and regulations.

Control and eliminate contaminants quickly and efficiently with Ohlson's metal detecting machines.

Check Weighers

Ensure the weight of your packaged product is consistent throughout the entire production process with a durable Ohlson check weigher.

These systems do more than just ensure the packaged weight of an item; they have an automatic reject system designed to re-direct out-of-tolerance product on the fly.

These machines can also be programmed to pause the line and alarm the operator to intervene and remove the out-of-spec item before continuing.

Streamline your quality management process, reduce product giveaway, ensure product quality and track productivity with these stainless steel machines.

COMPLETE AUTOMATED SYSTEMS

Ohlson Packaging is your premier choice for reliable and accurate automatic packaging machinery. Ohlson Packaging has a broad range of packing equipment for all your weighing and counting needs. We offer a variety of sizes of combination scales, multihead weighers and linear weighers.

Ohlson Packaging's fully automated packaging solutions provide results such as drastically lowering product giveaway, reduced labor time, increased shelf life of perishable products, and reduced packaging square footage. Our team is available to work with you to find the best solution to suit your needs.

Rotary Collection Table

Rotary tables are essential for product staging devices for a end-of-line production. The Stainless Steel Rotary Accumulation Collection Table is essential in the receiving and accumulation of finished bags. From here, operators can case pack the product for shipping or move the bags to another transfer conveyor for automated, end-of-line processing. The CT-47-SS is a customer favorite because it is cost-effective and efficient in the unloading of goods from the production line. It comes standard with 304 stainless steel construction, a 42" diameter, a high-quality concave surface and no pinch points for safer everyday operations. Other sizes are available upon request.

Supply Hopper

Easy to clean and operate, the supply hopper can meter product properly using vibratory feed control to bucket elevators and incline conveyors. Its stainless steel construction is available with flat or dimpled contact surfaces. The standard size is five cubic feet and other sizes are available.

Ohlson Packaging has fabricated a variety of configurations of this versatile delivery system to meet unique customer requirements.

Complete Automated Systems

From bags to trays to any type of container, automated packaging systems manage a variety of containers and are customized to your operation's specific needs.

Ohlson has complete automated solutions for pre-made bags, form, fill and seal bags, sachets and stick packs as well as tray, jar and clamshell packaging. These are designed to work with a variety of materials and films. Our systems are easy to operate and easy to maintain.

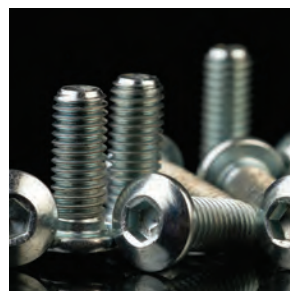

Work with Ohlson Packaging to design a complete system configured exactly to your needs.

 **OHLSON**
A DURAVANT COMPANY

Our commitment is to provide the best products and the best service. While some products are less complex and may only require a manual or spare parts kit for servicing, others are more sophisticated which benefit from a preventive maintenance program for improved system reliability, long-term use and peace of mind.

24/7/365 Technical Support

Whether it's during the day, in the middle of the night, on a holiday or weekend, we know it's critical when a piece of equipment goes down. Our technical support staff is available to answer the call and arrange for a technician to be on-site quickly.

Field Service

Our skilled technicians are highly trained and strategically located throughout the United States to assist with emergency situations and scheduled service calls. These technicians are available to support your maintenance activities and objectives to increase productivity, reduce running costs, and maximize equipment availability.

Replacement parts

Replacement parts availability is key to ensuring our equipment performs around the clock. We have parts covering generations of our equipment because of their durability and reliability.

Preventive Maintenance

Our preventive maintenance program is more than an investment in protecting an equipment purchase. We create a partnership between the customer and Ohlson Packaging that enables us to provide support throughout the entire lifecycle of our products. From preventive maintenance to monitoring spare parts inventory, our mission is to be there before the plant experiences a problem to avoid costly downtime.
